

BEYOND THE PROMPT

The 5-Step AI-Empowerment Framework

Banning AI is a losing battle. Architecting the workflow is the only way forward. This framework shifts students from "Autopilot" to "Co-Pilot," ensuring critical thinking remains at the center of the build.

01 THE SCOPE (HUMAN INTENT)

Before engaging AI, define the "Build." Students articulate objective and core argument in three clear sentences.

THE RULE: If you cannot define the goal without AI, you cannot manage the AI.

02 CONTEXT ARCHITECTURE

Replace simple queries with "Context Blocks." Define the Role, Constraints, and Rubric Standards.

THE RULE: We don't "ask" the AI; we "direct" the AI.

03 THE ITERATIVE BUILD

The AI generates a draft. Students treat this as "Raw Material"—a foundation to be inspected.

04 THE STRESS TEST

Students must identify three errors or hallucinations and verify against a non-AI source.

THE RULE: Trust is earned through verification. Student is the Inspector.

05 THE PERSONAL FINISH

Inject unique voice and personal anecdotes into the final 20% of the build.

THE RULE: AI provides the structure; Human provides the soul.

THE MASTER BUILD

From Passive User to Professional Project Manager

WHY STUDENTS "CHEAT"

Most students use AI as a shortcut because they haven't been taught to use it as a **multiplier**. When the assignment feels like "busy work," the AI becomes the escape hatch. When the assignment is "Architected," the AI becomes the power tool.

THE AI PROJECT MANAGER

I teach students to stop seeing themselves as "writers" and start seeing themselves as "Directors." They learn to manage the AI's output, judge its logic, and steer the creative process.

SOCRATIC PROMPTING

Imagine your students using AI to *debate* them, challenge their assumptions, and push their critical thinking further than a textbook ever could. That is the new classroom.

INTEGRITY IS BUILT, NOT ENFORCED

Detection software is a game of cat-and-mouse. **Architectural Workflows** are the solution. By grading the *process* (The Build) instead of just the *result*, you make cheating impossible and learning inevitable.

Ready to Lead the Next Build?

I help educators and teams design these workflows specifically for their curriculum. Stop the frustration and start the innovation.

DM "ARCHITECT" TO START

"The person who manages the AI will always out-perform the person who just uses it."
