

DEEPSEEK

The Productivity Architect Series: Excel & Logic Engineering Edition

1. WHAT IT IS

The **Efficiency Engineer**. Deepseek is a high-performance model optimized for technical reasoning, mathematics, and coding logic. It is built to solve complex 'if-then' puzzles with speed and precision.

2. WHAT IT IS NOT

It is **not a creative storyteller**. It lacks the 'warmth' of Claude and the broad ecosystem integration of ChatGPT. It is a specialized power tool for technical builds, not a general-purpose assistant.

3. WHY USE IT FOR EXCEL & LOGIC ENGINEERING?

Use Deepseek when your **Excel architecture gets complex**. If you are building a macro or a multi-layered formula that keeps breaking, Deepseek is the specialist you bring in to troubleshoot the logic.
