

ANALYZE DATA & COPILOT

The Productivity Architect Series: Microsoft Excel Edition

1. WHAT IT IS

A **Logic Specialist** that scans raw tables to identify patterns. It can generate Pivot Tables, write complex formulas from plain English, and perform automated statistical 'Site Surveys' of your data.

2. WHAT IT IS NOT

It is **not a substitute for data clean-up**. If your 'bricks' (data) are broken or inconsistent, the AI cannot fix the structural flaws. It is also not a primary database—it is a tool for calculation and insight.

3. WHY USE IT FOR MICROSOFT EXCEL?

Excel is the 'Engine Room.' Use AI here to **eliminate formula fatigue**. Instead of memorizing syntax, you describe the logical outcome, allowing the AI to architect the math while you verify the results.
