

NANO BANANA 2

The Productivity Architect Series: PowerPoint Visuals Edition

1. WHAT IT IS

The **Instant Visualizer**. Powered by the Gemini 3 Flash Image model, this is your text-to-image engine for creating high-fidelity, natively generated visuals and style transfers directly in your workflow.

2. WHAT IT IS NOT

It is **not an image editor** in the traditional sense (like Photoshop). You don't 'paint' with it; you 'describe' to it. It is not for creating charts or data-driven graphics; it is for conceptual imagery.

3. WHY USE IT FOR POWERPOINT VISUALS?

Use Nano Banana to **eliminate 'Death by Bullet Point'**. When you need a specific visual metaphor for a slide that doesn't exist in stock photo libraries, you architect the image here to match your deck's style.
