

PERPLEXITY AI

The Productivity Architect Series: The Research Bridge Edition

1. WHAT IT IS

A **Lead Investigative Researcher**. Unlike generative AI, Perplexity is a search-based 'Answer Engine' that provides real-time, cited data from the live internet to ground your projects in fact.

2. WHAT IT IS NOT

It is **not a creative writer** or a document formatter. It is also not a private vault; it searches public data to find the best 'materials' for your build. It is the 'Site Survey' tool, not the 'Construction' tool.

3. WHY USE IT FOR THE RESEARCH BRIDGE?

Research is the 'Bedrock' of every build. Use Perplexity to **verify claims and find primary sources** before you begin. It ensures that your Word docs and Excel sheets are built on verified data rather than assumptions.
