

BEYOND THE PROMPT

The 5-Step AI-Empowerment Framework

Banning AI is a losing battle. Architecting the workflow is the only way forward. This framework shifts students from "Autopilot" to "Co-Pilot," ensuring critical thinking remains at the center of the build.

01 THE SCOPE (HUMAN INTENT)

Before engaging AI, define the "Build." Students must articulate their objective, intended audience, and core argument in three clear sentences.

THE RULE: If you cannot define the goal without AI, you cannot manage the AI toward the solution.

02 CONTEXT ARCHITECTURE (INSTRUCTIONS)

Replace simple queries with structured "Context Blocks." Define the Role (Expert), the Constraints (Specific length/tone), and the Standards (Rubric alignment).

THE RULE: We don't "ask" the AI; we "direct" the AI.

03 THE ITERATIVE BUILD (MACHINE LABOR)

The AI generates a draft or brainstorm. Students are taught to treat this as "Raw Material"—a structural foundation that requires inspection, not a finished product.

04 THE STRESS TEST (CRITICAL ANALYSIS)

Students must identify three errors, hallucinations, or missed perspectives. They must verify the output against a trusted, non-AI source.

THE RULE: Trust is earned through verification. The student is the Senior Inspector.

05 THE PERSONAL FINISH (HUMAN SOUL)

The student refines the final 20% of the output, injecting their unique voice, personal anecdotes, and specific reflections that an AI cannot simulate.

THE RULE: AI provides the structure, but the Human provides the soul.
