

POWERPOINT ARCHITECTURE WORKSHOP

MASTERING NARRATIVE DESIGN + AI LEVERAGE | MICHAEL SMITH, M.S. ED.

Move beyond bullet points. This curriculum teaches you to architect visual narratives that capture attention, explain complex ideas, and leverage generative AI for high-impact storytelling.

PHASE 1: THE CORE FOUNDATION

1.1 THE SLIDE MASTER BLUEPRINT

Build a centralized design DNA. Master the Slide Master to ensure global consistency and create "AI-Ready" placeholder structures.

1.2 VISUAL INFORMATION ARCHITECTURE

Master Grids, Guides, and Hierarchy. Learn to "Direct the Gaze" of your audience using professional surveying tools for slide layout.

PHASE 2: AI LEVERAGE & MANAGEMENT

2.1 THE NARRATIVE ARCHITECT

Use AI to transform dense text into logical 7-10 slide storyboards. Focus on the narrative arc before adding a single drop of "paint."

2.2 THE VISUAL METAPHOR

Leverage Generative AI to create custom, high-impact imagery. Replace generic stock photos with meaningful visual "Site Photos."

Phase 3: The Custom Master Build

The Educator Build

Gamified instruction and interactive "Site Visits." Using AI to generate real-time checks for understanding within the deck.

The Student Build

The "Skyscraper Pitch." Using AI to simulate Q&A defense and stress-test presentation delivery for academic competitions.

The Executive Build

The Sales Narrative. Engineering high-stakes decks that move from friction-filled problems to automated AI-driven solutions.
