

Video P-2.3: Inbox Architecture

Course: Vault-P Office Productivity & Workflow Engineering

MODULE OVERVIEW

Goal: Processing email as data units, not conversation.

1. CONTEXT (THE HOOK) [0:00 - 0:25]

Email isn't work; it's a list of other people's priorities. Let's turn it into an engine.

2. ROLE (THE STRATEGIC DEMO) [0:25 - 1:45]

Architecture vs. Checking: We process in batches to protect our focus.

3. ACTION (THE PRO TOOLS) [1:45 - 3:00]

Demo: Using Outlook/Gmail rules and 'Move to Task' to clear the view.

4. FRAMEWORK (THE STUDENT TASK) [3:00 - 3:45]

C.R.A.F.T. Task: Turn off notifications for one hour and process your inbox in one 15-minute sprint.

5. TARGET (THE WRAP-UP) [3:45 - 4:00]

Master the stream, don't drown in it. I'll see you in the next build.

Production Checklist for Michael:

Visual: Notification 'Red Dots' disappearing. Demo of 'Drag to Task' functionality.
