

Video P-3.1: Time Blocking

Course: Vault-P Office Productivity & Workflow Engineering

MODULE OVERVIEW

Goal: Protecting the foundation of your schedule through rigid temporal architecture.

1. CONTEXT (THE HOOK) [0:00 - 0:25]

An architect doesn't hope a wall stays up; they build it. You can't hope you'll have time; you have to block it.

2. ROLE (THE STRATEGIC DEMO) [0:25 - 1:45]

Temporal Engineering: We move from a 'To-Do List' (reactive) to a 'Calendar' (proactive).

3. ACTION (THE PRO TOOLS) [1:45 - 3:00]

Demo: Converting a messy list of 10 items into 3 distinct color-coded blocks in Outlook or Google Calendar.

4. FRAMEWORK (THE STUDENT TASK) [3:00 - 3:45]

C.R.A.F.T. Task: Take your three '80/20' tasks and assign them exact start and end times on your calendar for tomorrow.

5. TARGET (THE WRAP-UP) [3:45 - 4:00]

If it's not on the calendar, it doesn't exist. I'll see you in the next build.

Production Checklist for Michael:

Visual: Live transformation of a sticky note list into a digital calendar. Highlight 'Buffer Blocks'.
